There are 4 models to choose from, based on the vaccines being transported – **Type Prevenar, Type Rotateq, Type A/B and Type C.** An electronic temperature sensor along with LCD display indicates "✓" if the product has remained within exposure limits. If the product is exposed beyond time-temperature limits as specified based on the type of vaccine, the display shows "**X**". It stores the data up to 40 days and user can see the history data of entire journey of vaccine using keyboard and display. For easy photocopying, the display is non-flashing. It is accompanied by a Shipment Information Card. User can generate the pdf report which provides a detailed temperature history of the trip for transportation records. Time stamps on alarm events allow supply chain partners to analyze variability and institute corrective measures based on elapsed time. All the parameters and alarm limits are pre-configured as per the requirement of guidelines. It comes with individual NABL traceable calibration certificate.
